

Installing Ag Data Viewer

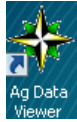

Copying GKData folder

1. Open "My Computer" from either your desktop or from the "Start" button
2. Select your CD drive or the location where you downloaded the "GKData" folder
3. Once you have opened up so you can see the "GKData" folder, Right Click on the folder and "Copy".
4. Open another copy of "My Computer"
5. Right Click on your "C:/" drive and "Paste"

Installing Ag Data Viewer

1. Open "My Computer" from either your desktop or from the "Start" button
2. Select your CD drive or the location where you downloaded the "AgDataViewer" Install
3. Double Click on the file and it will install. If you do not have NET Framework v. 2.0 on you PC it may take several minuets to install the software because it must add NET Framework.
4. The final window should say you have successfully installed Ag Data Viewer. If not please contact GK Technology at www.geektechforag.com (phone numbers are listed on the web site).

Software Setup

1. Once GKData is copied and Ag Data Viewer is installed there will be an  icon on your desktop. (double click this icon to open the software)
2. When the software opens, go to "Tools" and select "Preferences" and adjust your settings like below. (For setting folders the highlighted folder is the one that will be selected)
3. Under the "UTM Zone" tab select the correct zone for your location.
4. Once finished simply close the "Settings" window, and start the software by selecting "File" and "New" and "Map Window"
